
«module package»
EEGProcessorModule
contains
«module entry point»
run
+main()
creates
«main application»
EEGProcessorApp
+show_visualization()
+start_stream()
+stop_stream()
+start_recording()
+stop_recording()
+apply_filters()
+calculate_metrics()
+connect_board()
+disconnect_board()
displays with
«qt framework»
QMainWindow
extends
«abstract interface»
CollectorInterface
+prepare_session()
+start_stream()
+stop_stream()
+get_data()
+save_data()
implements
«data collection»
EEGCollector
+prepare_session()
+start_stream()
+stop_stream()
+get_data()
+save_data()
+insert_marker()
+get_board_info()
manages
«board configuration»
BoardConfiguration
+get_all_boards()
+get_board_requirements()
+create_input_params()
+get_board_description()
configures boards with
uses configuration from
«brainflow framework»
BoardShim
uses
«real-time visualization»
EEGVisualizer
+start()
+stop()
+update_plots()
+set_bandpass_filter()
+set_notch_filter()
visualizes data from
renders with
«brain map visualization»
BrainMapVisualizer
+start()
+stop()
+update_quality_map()
+update_electrode_display()
«visualization framework»
pyqtgraph
«signal processing»
SignalProcessor
+bandpass_filter()
+remove_environmental_noise()
+denoise()
+detrend()
+get_psd()
+get_band_power()
+get_eeg_metrics()
+perform_ica()
processes with
applies processing from
uses quality from
«brainflow framework»
DataFilter
«help ui component»
HelpButton
+show_help()
includes
triggers
«help support»
HelpSystem
+show_help_topic()
+show_eeg_concepts_help()
integrates
creates
«help dialog»
HelpDialog
