
«api module package»
APIPackage
contains
«module functions»
ModuleAPIFunctions
+get_api_integration()
+initialize_api()
creates and manages
«static data access api»
EEGDataAPI
+get_current_data()
+get_raw_data()
+get_channel_data()
+get_metadata()
+get_sampling_rate()
+get_channel_names()
+is_streaming()
+register_data_callback()
+get_eeg_channels()
+get_board_info()
+get_all_channels_quality()
«api integration service»
EEGProcessorApiIntegration
+explorer: Optional[Any]
+module_id: str
+data_service: DataAccessService
+interaction_integration: EEGProcessorInteractionApiIntegration
+api_callback_id: Optional[int]
+get_instance()
+register_api()
«static interaction api»
EEGProcessorInteractionAPI
+get_available_boards()
+connect_to_board()
+disconnect_from_board()
+start_stream()
+stop_stream()
+apply_filters()
+start_visualization()
+start_recording()
+stop_recording()
+insert_marker()
+perform_ica()
+convert_to_mne()
+compute_wavelet()
+apply_downsampling()
+get_system_status()
delegates to
«interaction api integration»
EEGProcessorInteractionApiIntegration
+interaction_service: IInteractionService
+module_id: str
+get_instance()
+register_api_methods()
«external service»
DataAccessService
+get_current_data()
+get_metadata()
+register_callback()
uses
«external service»
CollectorService
+is_connected()
+cleanup()
«external service»
IInteractionService
+get_available_boards()
+connect_to_board()
+start_stream()
+apply_filters()
«external api framework»
ApiExplorer
+get_instance()
+register_module()
+register_method()
+start_server()
+broadcast_event()
